

Olist Business Discovery

The Delivery Promise Is Breaking Trust — Here's The Data Proof

HVIA Data & AI Solutions

Who Is Olist?

Brazil's e-commerce enabler: **1000s** of sellers → **170+** marketplaces, one platform

Revenue comes from **SELLERS** (subscriptions + commissions)

Every disappointed customer = direct revenue risk

A Blind Promise System

78.9%

of orders arrive a WEEK+ before the promised date

Only 8.1% arrive late

The promise is inflated, not failing — static estimates hide the real speed.

Late Delivery Kills Trust

4.31★

on-time

2.57★

late

-1.7 points

Purely from TIMING — not price, not product.

Root Cause #1 — Slow Sellers

×5

customer lateness when seller hands over late (4% → 22%)

Verified across seller states — e.g. MA: **33%** seller lateness → **24%** customer lateness

Root Cause #2 — Slow Routes

Some shipping lanes delay orders even with punctual sellers

ES state: only **5.5%** seller lateness → **7.7%** customer lateness

This is a LOGISTICS problem, not a seller problem.

Two Predictable Problems. Zero Prediction.

- Static estimates ignore seller behavior + route performance
- Costing trust both ways: inflated promises hide real speed — late surprises destroy it

PREDICTABLE

NOT PREDICTED

Recommended Roadmap for Olist

1

STEP

NOW: Audit seller
handover punctuality
—
flag the ×5 risk sellers

2

STEP

3 MONTHS: Fix
promise dates by
route —
ES-type lanes need
recalibration

3

STEP

LONG TERM: Replace
static estimates with
prediction engine —
seller profiles + route
intelligence

Each step is measurable with existing data.

HVIA's Smart Delivery Promise Engine

Order → AI Prediction → Honest Date → Happy Customer

Seller punctuality profile (×5 risk proven)

Route intelligence (lane variability proven)
